

# SMSC Subject Statement

## Subject: Computing

### Spiritual

- Computing supports spiritual development by looking at how it can bring rapid benefits to discussions and tolerance to an individual's beliefs. However, pupils are also exposed to the limitations and abuse of the internet where they question and justify the aims, values and principles of their own and others' belief systems.

### Moral

- Computing supports moral development by looking at how its developments have had an impact on the environment as technology has meant that old ways of working have been changed to help the environment.

### Social

- Computing supports social development by completing group work within lessons as well as practical tasks. Pupils are required to understand social media and the advantages these sites have brought as well as the numerous problems such as cyber bullying.

### Cultural

- The development in technology has impacted different cultures and backgrounds in different ways. More developed countries are able to keep pace with the developments in technology whilst less developed ones cannot.
